#### 1.產生zombie以後是否可以使用kill指令將zombie殺掉?

不可以,要避免zombie可以在父行程裡使用 wait() 或產生假父

#### 2. 請附上截圖證明『zombie』的確會產生10個zombie

show	4728	0.0	0.0	9340	724 pts/1	S+	14:56	0:00 grepcolor=auto defunct

產生10個zombie

#### 3. 請附上截圖證明『nozombie』幾乎不會產生zombie

```
      show@show-VirtualBox:~/system-programming/hw10$ ps -aux | grep "defunct"

      show
      4612 0.3 0.0 0 0 pts/0 Z+ 14:55 0:00 [nozombie] <defunct>

      show
      4714 0.0 0.0 9340 660 pts/1 S+ 14:55 0:00 grep --color=auto defunct
```

只產生一個zombie (死去的假父)

# 4. 請說明你的系統中『task\_struct』到底有多大,並附上截圖證明你的說法

6208 bytes

```
show@show-VirtualBox:~/system-programming/hw10$ sudo cat /proc/slabinfo | grep task_struct
task_struct 602 650 6208 5 8: tunables 0 0 0: slabdata 130 130 0
```

### 5. 描述「辛棄疾」的『風景畫』

辛棄疾的人生過得很不順遂,壯志難酬
